State	Finished
Completed on	Monday, 31 August 2026, 8:06 PM
Time taken	41 secs
Marks	1.00/1.00
Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Problem Statement:

Given a sorted array and a value x, the floor of x is the largest element in array smaller than or equal to x. Write divide and conquer algorithm to find floor of x.

Input Format

First Line Contains Integer n – Size of array

Next n lines Contains n numbers – Elements of an array

Last Line Contains Integer x – Value for x

Output Format

First Line Contains Integer – Floor value for x

Answer: (penalty regime: 0 %)

```c
#include <stdio.h>

int floorValue(int arr[], int low, int high, int x) {
    if (low > high)
        return -1;

    int mid = (low + high) / 2;

    if (arr[mid] == x)
        return arr[mid];

    if (arr[mid] > x)
        return floorValue(arr, low, mid - 1, x);

    int result = floorValue(arr, mid + 1, high, x);

    if (result == -1)
        return arr[mid];

    return result;
}

int main() {
    int n, x;
    scanf("%d", &n);

    int arr[n];

    for (int i = 0; i < n; i++)
        scanf("%d", &arr[i]);

    scanf("%d", &x);

    printf("%d\n", floorValue(arr, 0, n - 1, x));

    return 0;
}
```

	Input	Expected	Got	
	6 1 2 8 10 12 19 5	2	2	
	5 10 22 85 108 129 100	85	85	
	7 3 5 7 9 11 13 15 10	9	9	

Passed all tests!

Correct

Marks for this submission: 1.00/1.00.
